**Aim** To remove cellulite from thighs.  
**USP** The treatment combines the latest technologies for best results.

**We say** I've tried various cellulite treatments, from body-brushing until my arms hurt to Endermologie, and nothing has worked. Vela Shape is a new device that promises to treat cellulite and reduce fat through a mechanical manipulation of the skin using a device that acts like a vacuum cleaner, sucking the skin and letting it go again. Dr Haus used it on my upper legs, moving the machine up and down a few times on each area. It is not painful but it does get quite hot, and each session lasted about 30 minutes. After my series of six sessions my measurements have gone down around the thighs by 2cm on average. I will go back for my top-up once a month and hope that it will keep making a difference.

**Price** From £85, or £500 for six sessions.
